

# Flexible. Safe. Efficient.

## The benefits of Nordisch at a glance:

- + Innovative charging algorithms: **Nordisch Akku Charge Pro** technology preserves batteries and extends their service life\*
- + Combined operation saves time and money (e.g. NiCd, NiMh, Li-Ion and many more)
- + Thermal management prevents premature battery ageing and reduces power consumption
- + Changing the adapter only takes a few seconds
- + Discharge protection when the battery is attached
- + Future-proof due to interchangeable modules
- + Innovative safety concept in the form of an intelligent interface for charging parameters and charge status
- + Up to 36 V as standard
- + Updatable free of charge
- + Acoustic signalling, for example, in the event of reversed polarity or a contact break in the battery
- + Coupling with fire alarm system possible (in connection with Nordisch charging system cabinets)

\* Tested under laboratory conditions in comparison to the manufacturers' single chargers, depending on battery type.

# Full power with Nordisch –

## Your partner for sustainable charging technology

The charging technology of today can't be the charging technology of tomorrow, surely? Yes it can! That is, if you put your faith in long-term quality and a high level of expertise with regard to your charging technology.

Nordisch has developed genuine technical innovations that provide you with more than just state-of-the-art technology: **Nordisch supplies the charging technology of the future!**

# FULLY FLEXIBLE. SAFE. EFFICIENT.

## NORDISCH MULTIPLE CHARGERS

With the future-proof multiple chargers from Nordisch, you can charge up to 4 batteries at the same time – irrespective of the manufacturer and battery type. Each base unit can be combined with different charger adapters and is suitable for every type of battery.

What's more, the service life of your batteries can be extended considerably\* thanks to the patented charging method **Nordisch AkkuChargePro!**

\* Tested under laboratory conditions in comparison to the manufacturers' single chargers, depending on battery type.

## NORDISCH CHARGING SYSTEM CABINETS

With modular charging system cabinets from Nordisch, you have the option to charge up to 32 batteries simultaneously. Due to the fact that several base units and adapters can be used in a flexible manner, setting up your own customised system is very straightforward.

The system is also suitable for tight spaces and subsequent expansions thanks to the on-board air conditioning provided by a regulated twin fan.

## NORDISCH TEST DEVICES AND BATTERY MANAGEMENT

With the variable Nordisch test devices, you'll always be on the safe side. No matter whether you use the Nordisch "Quickcheck" or "Intensivtester": analysing faults and malfunctions is very straightforward indeed.

Compatible with NiCd-/NiMh and Li-Ion batteries up to 44V – the Nordisch "Schnelltester" is the only device in the world capable of this!

## NORDISCH LABEL PRINTER

You can print out the test results from the test devices without any additional effort – an additional computer is not required. You can stick the practical labels onto the test objects themselves. This helps you to keep track of each battery's performance.

The thermal direct printer is, of course, compatible with all Nordisch test devices.

**SO EASY:** Put your own customised Nordisch system together using our online configurator in a few simple steps!

## HIGHLY INNOVATIVE. NORDISCH.

Every solution is born from a challenge. As your partner, Nordisch will pave the way to your goal and walk with you every step of the way. Because we specialise in the **development of specific designs** for your business.

Do you need a very specific type of battery? Does your company have specific system cabinet requirements?

**Then get in touch! We would be delighted to find a solution for you.**

**AkkuCharge Pro – now available for lead drive batteries up to 48 V!**
